→Ancient wisdom - a vision to past is meeting cutting-edge science research that look forward to a new and promising future

→East meets West - mutual understanding and current developments

→Necessity to engage Science and medical research

What is Tai Chi?

A mind-body exercise :
roots in Ancient Chinese wisdom and traditions
traditional Chinese medicine
martial arts
Philosophy

“TaiChi training integrates slow, intentional movements with breathing and cognitive skills (for example mindfulness and imagery). It aims to strengthen, relax and integrate the physical body and mind, enhance the natural flow of Qi, and improve health, personal development, and self-defense.”

(Wayne Peter, The Harvard Medical School Guide to Tai Chi, Shambala Publications, 2013 by Harvard Health Publications)

The variety of Tai Chi

' Tai Chi is a journey to a balanced system - it cannot be accomplished overnight'

Internal martial art

Relaxation exercise

Breathing exercise

Enhancement of creativity and art expression

Therapeutic application

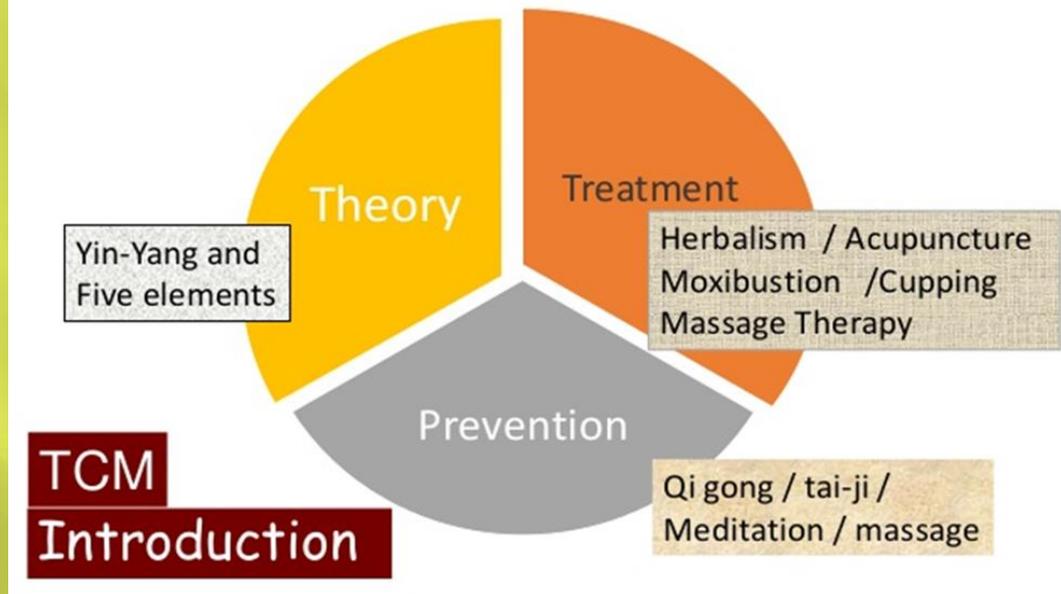

Holistic and alternative exercise

Mild self-defense applications

Tai Chi - TCM

- Traditional forms of medicine have been used in China since the 3rd Century. Traditional Chinese Medicine (TCM) system consist three parts.

The science of Tai Chi

Cutting edge - research supports that Tai Chi
improves

Flexibility, balance and mobility, sense of well-being

During Tai Chi training the combination of movements
leads to a coordination and integration of the upper
halves with the lower parts of the body, the left with the
right halves of the body and the external expressions
with the inside or the core.

Components of exercise:

rythmic and concious breathing

Cognitive and emotional (intention, visualization,
imagery, focus of attention, concentration)

Research

'Reductionism is less effective when dividing a problem into its parts - this can lead to a loss of very important information of the whole.' (2006, A. C. Ahn et al.)

Multiple factors are often responsible for a disease such as diabetes, coronary artery or current low-back pain.

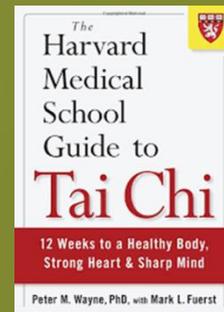

- 'Meditation in motion' or 'Medication in motion' is often used to describe the sensation of Tai Chi & Qi Gong

- Mindfulness means discovering the mind-body connection

The example of Harvard Medical School – 'The look to the East'

- The Holistic thinking evidence in medicine:
Research evaluation of complementary and integrative medical therapies
- Educational programs to the medical community and the public
- Designing sustainable models of complementary and integrative care delivery in an academic setting
- 2000 Division for Research and Education in Complementary and Integrative Medical therapies
- Harvard Medical School & Osher Center for Integrative Medicine & Brigham and Women's Hospital

Tai Chi - integration with the social and physical environment

Tai Chi - lifelong learning Social environment

Practicing in a group -

Responding and coping to other people cues,

Tuning in to a larger group dynamic activates the
motivational process
