

Software and Workshop Materials Instructions

For the requirements of our upcoming Digital Humanities workshops, please complete the installation of **Orange Data Mining**, enable the required add-on, and download the pre-processed dataset **before** attending the class.

1. Downloading and Installing Orange

Download the installer corresponding to your operating system from the official website: <https://orangedatamining.com/download/>

Windows

1. Download and run the .exe installer.
2. Follow the setup wizard accepting default options (*Next*).
3. Launch **Orange** from your Desktop or Start Menu.

macOS

1. Download the .dmg file.
2. Drag the **Orange** icon into your **Applications** folder.
3. **Security Note:** If blocked on first launch, navigate to *System Settings* → *Privacy & Security*, scroll to *Security*, and click **Open Anyway**.

2. Installing Required Add-ons

1. Launch **Orange**.
2. Open the menu: Options → Add-ons....
3. Locate and check the following packages:
 - **Image Analytics** (Orange3-ImageAnalytics)
 - **Text** (Orange3-Text)
4. Click **OK** and select **Restart Orange**.

3. Workshop Data File Download

Due to copyright restrictions and to optimize network speed during class, original manuscript images will not be distributed directly. Instead, we will use pre-computed image features (vectors/embeddings).

1. Download the file **patmos_mss_embedded.tab** to your computer.
2. **Do not edit or rename** this file in Excel before loading it into Orange, as this may corrupt the metadata formatting.
